airworks

# airworks

FIM, brand dell'azienda Sil Fim, nasce, cresce e si sviluppa grazie al suo DNA manifatturiero, che coniuga la ricerca costante di nuove soluzioni, materiali e processi di lavorazione, con la tenacia, la concretezza e la dedizione al prodotto.

FIM fa parte di un'azienda plurale, fatta di mani, teste e cuore, motori di energie e risorse in costante evoluzione, capaci di mettersi in relazione e al servizio di mercati e realtà industriali di portata globale.

FIM è la sintesi esatta del trattamento dell'aria, Airworks, come affermazione del paradigma di un mondo industriale che interpreta i tratti più profondi del rapporto tra uomo, tecnologia e territorio.

FIM, a brand of the Sil Fim company, has the manufacturing spirit in its DNA. It owes its birth, growth, and development to this spirit, combining a constant effort in developing new solutions, materials, and production techniques with determination, pragmatism, and dedication to the product.

FIM is part of a company made up of many people, many hands, heads, and hearts. Many engines that keep energies and resources constantly moving and evolving, to be able to interact with and serve international markets and players.

FIM is the ultimate synthesis of air treatment, Airworks, the paradigm of a model of industry that has the relationship between man, technology, and territory at its core.

# Shaping our design

## **Il nostro design si modella intorno alla funzione.**

Produciamo cappe aspiranti e accessori di arredo di alta qualità dal 1985. Dalla progettazione alla produzione, fino ai test di controllo qualità, ogni fase del processo è realizzata in Italia, all'interno del nostro stabilimento di Jesi, nelle Marche. Proprio per questo siamo in grado di personalizzare i nostri prodotti, dalle misure ai colori, per soddisfare ogni specifica esigenza.

La creazione di una cappa aspirante inizia proprio dalla sua funzione e il design deve contribuire a garantire prestazioni eccezionali, senza esitazioni.

## **Our designs are modelled around function.**

We have been making high-end kitchen hoods and furnishings since 1985. Each stage of the manufacturing process – from development, to production, to quality control tests – takes place in Italy, in our plant in Jesi, in the Marche region.

This is why we are able to offer fully customized products, made-to-order in personalized colours, to satisfy every client's needs.

The creation of a kitchen hood must begin from its function, with design contributing to exceptional, faultless performance. In addition to manufacturing our own FIM branded products, we provide our services to OEM industries.

FIM

**Customized Size**

È possibile creare i prodotti con misure personalizzate su richiesta.

It's possible to create the products with customized sizes on request.

**Customized Color**

È possibile creare i prodotti con colorazioni personalizzate su richiesta.

It's possible to create the products with customized colors on request.

# Shaping our materials

## **I nostri materiali riflettono forza e bellezza**

Lavorare l'acciaio è la nostra arte. Un'arte che si riconosce dalla volontà di selezionare le migliori materie prime, con spessori che assicurano durata e affidabilità nei dettagli di modellazione, saldatura, satinatura e nell'accoppiamento magistrale di superfici lineari e curve. Materiali diversi per stile e funzione, opere d'arte industriale prodotte totalmente all'interno delle nostre unità produttive.

In ogni fase, i nostri esperti esaminano il lavoro manualmente alla ricerca della perfezione. Grazie a questo controllo costante della qualità costruiamo prodotti eccellenti, frutto delle abilità dei nostri designer, delle mani dei nostri professionisti e della scelta dei materiali migliori.

## **Our materials are a display of strength and beauty**

We approach steel working as if it were an artform: thus, we choose only the finest raw materials, with enough thickness to ensure durability and accuracy when shaping, welding, and satin-finishing the metal. We skilfully combine flat and curved surfaces. We know how to manufacture products with different materials, to achieve looks and serve different purposes: industrial masterworks entirely manufactured in-house.

At each stage of the process, our experts manually inspect the product to guarantee a perfect result. Thanks to such constant quality control we manufacture outstanding products, the result of the skill of our designers, the handywork of our craftsmen, and the choice of high-quality materials.

# Shaping our expertise

## La nostra esperienza è un motore di ricerca costante

In quasi 40 anni di attività, rimane costante la volontà di realizzare prodotti eccellenti e il miglioramento continuo in tutte le fasi dello sviluppo del prodotto: dal design alla progettazione, dalla selezione dei materiali all'abilità nella loro lavorazione.

Ci guida la passione di capire quali siano le reali esigenze dei nostri clienti e, più in generale, dei consumatori finali. Chi usa i nostri prodotti deve sentirsi appagato dall'aver scelto il meglio, in termini di qualità e unicità dei dettagli.

## Our experience drives constant innovation

In the course of nearly 40 years of activity, the will to make outstanding products has remained a constant. We strive for continuous improvement in all stages of manufacturing: from design, to development, to the choice of materials, and the skill in crafting them.

We are passionate about understanding and meeting our customers' needs, and the end users' needs in general. Those who use our products must feel entirely satisfied that they have chosen the best product available in terms of quality, care for details, and unique design.

# Shaping our technologies

## La nostra tecnologia si misura con la qualità della vita.

Dedichiamo la massima cura ad ogni fase di lavorazione. Con lo stesso approccio ci affidiamo all'utilizzo delle tecnologie più evolute, affiancati da partner internazionali estremamente specializzati, in grado di potenziare le prestazioni dei nostri prodotti.

L'integrazione tecnologica tocca tutti gli ambiti del trattamento dell'aria domestica, dalla sensoristica per automatizzare le funzioni e monitorare la qualità dell'aria, ad avanzati sistemi di filtrazione per la riduzione degli odori e per combattere virus ed allergeni. L'obiettivo è migliorare la vita in cucina, mettendo il benessere al primo posto.

## Our technology is measured by quality of life.

We devote the utmost care to every stage of manufacturing, and we take the same approach when it comes to technology: we make use of the most advanced technologies available, relying on specialized international partners to improve our products' performances.

Our products' technological content ensures all-round domestic air treatment, including sensors that monitor air quality and allow for automatic operation, as well as advanced filtration systems that reduce odours and protect from viruses and allergens. Our goal is to improve the quality of life in the kitchen, making well-being the main priority.

# Induction systems

I sistemi Induction systems sono stati progettati per porre rimedio al fenomeno della condensa. La condensa si può manifestare in caso di cottura prolungata con forte produzione di vapore. Il processo fisico che la determina si ha quando il vapore caldo che fuoriesce dalla pentola, trova una differenza di temperatura con la superficie della cappa con cui viene a contatto, creando le fastidiose goccioline. Nel caso dei piani cottura a gas, la fiamma riscalda per irraggiamento anche l'ambiente circostante, quindi il vapore trova una bassa differenza di temperatura e tende a fare poca condensa. Nel caso dei piani ad induzione invece, non esistendo una fiamma, il vapore trova un'alta differenza di temperatura con la superficie della cappa, creando molta condensa.

The Induction systems has been developed to remedy the formation of condensation. Condensation can occur in case of a long cooking with strong production of steam. The physical process that is creating condensation has to do with warm steam that comes out of the pot and meets a difference in the temperature with the surface of the extractor hood that touches: this gives as consequence the formation of water drops. When you have gas hobs the flame is making also the surroundings warm by irradiation, so the steam meets a lower difference in temperature and the formation of water drops is less. When you have induction hobs the flame is not existing, so the steam meets a high difference in the temperature when it goes into contact with the extractor-hood surface and this brings to a high formation of condensation.

## Induction System BASE

Sistema dotato di filtri a maglia in acciaio inox, inclinati di 15°, studiati per far condensare i vapori della cottura, i quali vengono convogliati per gravità e raccolti in un'apposita vaschetta, che può essere rimossa e svuotata per la pulizia.

System equipped with stainless steel mesh filters, inclined at 15°, designed to condense the cooking vapors, which are conveyed by gravity and collected in a special tray that can be removed and emptied for cleaning.

## Induction System TECH

Sistema dotato di un filtro altamente tecnologico in grado di creare un "gioco d'aria", grazie alla sua particolare geometria, che favorisce il convogliamento dei vapori fino alla completa captazione verso la vaschetta di cui è automunito. Il filtro contribuisce anche ad un design particolarmente tecnologico del prodotto.

System equipped with a high-tech filter able to create a "play of air" thanks to its particular geometry, facilitating the conveyance of vapors up to the complete collection towards the tank with which it is provided. The filter also contributes to a particularly technological design of the product.

## Induction System PLUS

Sistema che elimina in maniera istantanea il problema della condensa grazie alle superfici in acciaio totalmente riscaldate per mezzo di un sistema d'irraggiamento elettrico a basso consumo, che favorisce la diminuzione del differenziale termico nel caso di cottura con piani ad induzione.

System that instantly eliminates the problem of condensation thanks to the steel surfaces being totally heated by means of a low-consumption electric radiation system, which favors the reduction of the differential thermal when cooking with induction hobs.

# Filtering systems

## **Cambiare l'aria che respiriamo**

Tra i vari sistemi di filtraggio dell'aria utilizzati e sviluppati da Fim airworks, la tecnologia al plasma è tra i più efficienti metodi di purificazione dell'aria che riduce gli odori fino al 99%.

Nessun filtraggio meccanico degli odori, ma una trasformazione molecolare da aria inquinata ad aria pulita. Elimina germi, batteri, virus, allergeni, fumo di sigaretta, ecc., e riduce il rischio di malattie ed infezioni.

Il sistema è usato da molti anni nelle cucine professionali in catene di ristoranti, per eliminare odori e fumo molto più densi dei fumi da cucina domestica ed ha sempre funzionato molto efficacemente.

## **La tecnologia al plasma non filtra l'aria... la trasforma!**

Il plasma attiva un processo chimico che cambia la composizione delle molecole dell'aria con un processo elettrico efficiente e sicuro. Nessuna aggiunta di sostanze chimiche, nessuna filtrazione meccanica. L'aria trattata, all'uscita del sistema, contiene solo ossigeno, una piccola umidità residua e CO<sub>2</sub>. Resta solo aria pura, la concentrazione di ozono all'esterno del filtro al plasma è zero!

Il sistema funziona senza alcuna manutenzione per tutta la vita della cappa!

## **Change the air you're breathing**

Among the various air filtration systems used and developed by Fim airworks, plasma technology is one of the most efficient air purification methods with 99% of odour reduction. No filtering, no mechanical odour trapping, but a physical air transformation from polluted to clean air. It extinguish germs, bacteria, viruses and allergens, cigarette smoke, etc., and lower the risk of illness and infections.

It is used since many years in professional kitchens by restaurant chains, and in food processing, to eliminate odors and smoke which are much denser than cooking fumes in private households, and always worked very effectively.

## **With plasma you don't filter the air... you treat it!**

Plasma is a chemical process which change the molecules composition with an efficient and safe electrical process. There are no added chemicals, no mechanical filtering. Final products after filtration are only oxygen, a small residual humidity and CO<sub>2</sub>. This is just pure air, the ozone concentration on the outside the plasma reaction device is zero!

The plasma filter works without maintenance for the entire cooker hood's life!

# AirMate

## Un compagno fidato in cucina

La nuova tecnologia intelligente e integrata **AirMate** porta un nuovo livello di comfort e cura in cucina.

Il sistema AirMate automatizza sia la ventilazione che l'illuminazione, oltre a offrire un'integrazione smarthome e smartphone.

La cappa è dotata di 11 sensori integrati che misurano una serie di caratteristiche di qualità dell'aria, come particelle fini (PM2.5), composti organici volatili totali (TVOC), CO2, umidità, temperatura e movimento. Utilizzando una varietà di algoritmi complessi, la cappa sa esattamente come rispondere per garantire una ventilazione ottimale regolando la velocità di estrazione, garantendo così una cottura senza problemi, livelli minimi di rumore, un consumo energetico e una sana qualità dell'aria interna per tutto il giorno.

La cappa continuerà a ventilare in modalità silenziosa una volta terminata la cottura, fino a quando la qualità dell'aria non sarà ripristinata alla normalità.

Anche le luci a LED automatiche, con luce dimmerabile e dinamica per la temperatura del colore, sono in grado di adattarsi in ogni ambiente allo stile della cucina.

## A reliable ally in the kitchen

The new **AirMate** smart and integrated technology brings a new level of comfort and care in the kitchen.

The AirMate system automates both ventilation and lighting, as well as offering smart home and smartphone integration.

The hood is equipped with 11 built-in sensors to measure a range of air quality characteristics, such as fine particles (PM2.5), total volatile organic compounds (TVOC), CO2, humidity, temperature, and movement. Using a variety of complex algorithms, the hood knows exactly how to perform to ensure optimal ventilation by adjusting the extraction speed, thus guaranteeing trouble-free cooking, minimal noise levels, energy consumption and healthy indoor air quality throughout the day.

After cooking, the hood will continue to ventilate in silent mode until the air quality is restored to normal.

Even the automatic LED lights, with dimmable and dynamic light for the color temperature, are able to adapt to the style of the kitchen in any environment.

Scopri di più

# Professional

Le Cappe Professional sono dotate di un motore altamente performante con diametro di uscita di 200 mm e di filtri in acciaio che donano al prodotto il design tipico delle cucine industriali. L'aria in aspirazione viene costretta nel "percorso a labirinto" dei filtri aumentando il grado di captazione dei grassi che vengono convogliati per gravità e raccolti in un'apposita vaschetta.

Sono lavabili in lavastoviglie, facilmente pulibili e di lunga durata.

The Professional hoods are equipped with a high performing motor having an outlet diameter of 200 mm and s/steel grease filters giving to the product the typical look of industrial kitchens. The air is forced into the "labyrinth path" of the filters increasing the grease captation level, which are conveyed by gravity and collected in a special tray.

These grease filters can be washed in the dishwasher and can be easily cleaned and are having a long life.

# Dynamic Light

Alcuni modelli sono dotati di illuminazione led che consente di variare la temperatura del colore della luce da 3000 a 5700 Kelvin, quindi passare dalla tonalità di luce bianco caldo a bianco freddo così da rendere l'area illuminata più confortevole.

Some models are equipped with LED lighting which allows you to change the colour temperature of the light from 3000 to 5700 Kelvin, so you can go from warm white light to cold white light and the area is more comfortable.

# Quality and environment

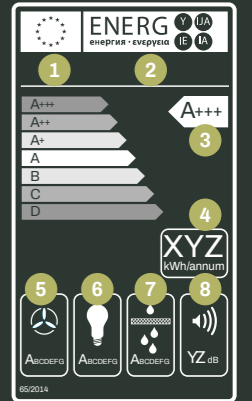

La proprietà della SIL FIM ha stabilito di basare la gestione aziendale su un Sistema di Gestione per la Qualità ed Ambiente, conforme ai principi delle Norme UNI EN ISO 9001: 2015 e UN EN ISO 14001: 2015. Tale sistema si concretizza in azioni organizzative e tecniche applicate a tutti i settori aziendali, volte ad ottenere la piena soddisfazione dei propri clienti ed il miglioramento continuo dei propri prodotti nel rispetto delle risorse ambientali.

SIL FIM property decided to base the handling of the company on a QUALITY SYSTEM FOR PRODUCTION and ENVIRONMENT compliant with the following norms: UNI EN ISO 9001: 2015 and UN EN ISO 14001: 2015. This system is based on organization and technical actions applied to all departments of the company, these actions are meant to get the full satisfaction of the customers and the continuous improvement of the products taking the ambience/environment into the highest consideration.

# Energy label

Per tutti i nostri prodotti è possibile visualizzare e scaricare l'etichetta energetica (versione Europa e Turchia) e le informazioni dettagliate (product fiche) di ciascun prodotto SIL FIM collegandovi al sito internet [www.fimhoods.com](http://www.fimhoods.com) alla sezione ENERGY. In ogni scheda tecnica delle nostre cappe trovate la voce CLASSE ENERGETICA con l'indicazione della classe del prodotto. L'immagine mostra come leggere l'etichetta energetica:

1. Nome o marchio del fornitore.
2. Codice ID del modello.
3. Classe di efficienza energetica. La punta della freccia contenente la classe energetica del modello si trova all'altezza della punta della freccia indicante la relativa classe di efficienza energetica.
4. Consumo annuo di energia, espresso in kWh, arrotondato alla cifra intera più vicina. Per il calcolo sono presi in considerazione dei fattori standard quali la durata media di funzionamento giornaliero, ovvero 60 minuti, la durata media di illuminazione giornaliera, ovvero 120 minuti, ed un utilizzo per 365 giorni.
5. Classe di efficienza fluidodinamica.
6. Classe di efficienza luminosa, determinata dal rapporto tra l'illuminamento medio della superficie di cottura (espresso in lux) e la potenza nominale assorbita in watt.
7. Classe di efficienza di filtraggio, espressa in base alla percentuale di grasso rimasta nei filtri antigrasso della cappa.
8. Indica il livello di rumore in dB, misurato sotto forma di potenza sonora della cappa azionata alla potenza massima di uso normale.

For each products you can view and download the energy label (version Europe and Turkey) and detailed information (product fiche) of each product SIL FIM by connecting to website [www.fimweb.it](http://www.fimweb.it) [www.fimhoods.com](http://www.fimhoods.com) see ENERGY section. In each sheet of our hoods you find the item ENERGY CLASS indicating the class of the product.

The image shows how to read the energy label:

1. Supplier's name or trade mark.
2. ID code model identifier.
3. The Energy efficiency class. The head of the arrow containing the energy efficiency class of the domestic range hood shall be placed at the same height as the head of the arrow of the relevant energy efficiency class.
4. The Annual energy consumption (AEC hood) in kWh rounded to the nearest integer. For the calculation standard factor are considered like the average running time per day, 60 minutes, the average lighting time per day, 120 minutes and a use of 365 days.
5. The Fluid Dynamic Efficiency.
6. The lighting Efficiency class determined by the ratio between the average illumination (in lux) and the nominal electric power of the lighting system.
7. The Grease Efficiency class means the relative amount of grease retained within the range hood grease filters.
8. The noise value (in dB) measured as the Airborne acoustical A-weighted sound power emissions at the highest setting for normal use.

# Piani aspiranti Extractor hobs

## Fusione in cucina

I Piani aspiranti ad induzione coniugano aspirazione e cottura in un unico elettrodomestico e con il loro sistema di aspirazione centrale direttamente sul piano raggiungono livelli elevati di captazione dei fumi ed efficienza energetica.

La posizione del motore, posto sotto la griglia di aspirazione, garantisce di poter avere un maggiore spazio utile nel mobile della cucina. Inoltre i comandi touch control consentono un funzionamento ottimale mantenendo sempre ideale il clima della cucina.

## Fusion in the Kitchen

The Extractor hobs are coupling aspiration and cooking in one appliance and with their central aspiration system directly on the hob can reach high levels of fumes captation and energy values.

The position of the motor, placed under the aspiration grid, enables to have more space to be used in the kitchen cabinet. The touch controls allow perfect operations, always keeping the best climate in the kitchen.

# Downdraft

La fusione tra design e tecnologia dona a questi modelli il dono dell'invisibilità, dato che essendo incassati sul mobile della cucina lasciano ampio spazio intorno alla zona di cottura.

Questi modelli hanno la particolarità di poter aspirare i vapori direttamente dal piano di cottura; questo rende l'aspirazione efficace e particolarmente adatta a cucine molto grandi in cui i fumi si possono disperdere nell'ambiente con più facilità. I modelli Downdraft sono posizionati dietro il piano cottura e sono facilitati nell'aspirazione grazie al loro sistema motorizzato.

Un'altra particolarità è data dal motore di aspirazione, inserito nel mobile, oppure installato in un altro vano interno alla casa o esternamente che permette di risparmiare spazio.

The combination of design and technology gives to these models the gift of invisibility: as integrated in the working top they leave a lot of space around the cooking zone.

This models can suck the vapours directly from the cooking hob; this is making the aspiration very performing and suitable for big kitchens where the fumes can travel in the room more easily.

The Downdraft models are placed inside the cooking hob and are having their sucking operations made easier by the system with motor. Another special feature is the motor, also integrated into the cabinet or installed in a separate room internal or external place of the house, which allows to save space.

# Isola Island

Le Cappe ad isola con la loro facoltà di libera installazione e poste sopra al piano cottura, in modo da aspirare direttamente i fumi che si producono, ricoprono il ruolo di protagoniste come massimo elemento di design per le cucine più prestigiose.

Acciaio inox, vetro, tiranti, pannelli...sono solo alcuni degli elementi che caratterizzano la regina dell'aspirazione e la rendono un elemento distintivo nell'architettura della cucina.

Island hoods with their possibilities to be freely installed above the cooking hob and take directly the fumes produced, are the real main character as highest design element for the best design kitchens.

Stainless Steel, Glass, bars, panels...are just some of the elements featuring the King Element of aspiration in the kitchen architecture.

# Soffitto Ceiling

Nelle **Cappe a soffitto** il sistema di aspirazione è «invisibile». La captazione dei fumi di cottura avviene quasi senza accorgersi, sfruttando il fenomeno della convezione in cui l'aria più calda e densa di vapori sale verso l'alto.

Questa soluzione garantisce la massima altezza libera ed un campo visivo senza ostacoli attorno alla zona di cottura, lasciando così ampio spazio alla creatività nella progettazione della propria cucina dei sogni. Tutti i modelli sono gestiti tramite comando a distanza.

In the **Ceiling hoods** the aspiration system is “invisible”. The cooking fumes captation is happening in an easy way taking advantage of the convection phenomenon where the warmer and heavier air is rising upwards.

This solution allows to have a lot of space free in the height and a lot of visibility without obstacles around the cooking area, leaving space to a lot of possibilities when the kitchen of our dreams is designed. All the models are controlled by remotes.

# Incasso Built-in

La linea di Cappe a incasso si tratta di un classico che non può mai mancare ad ogni produttore di cappe aspiranti da cucina. Sempre molto popolari, hanno il chiaro vantaggio di occupare pochissimo spazio dato che sono montate all'interno del pensile superiore alla zona di cottura, ed in questo modo risultano completamente invisibili.

L'aggiunta di frontalini estraibili a scomparsa aiutano una migliore captazione dei fumi e basta un tocco per movimentare lo sportello ed avviare o terminare automaticamente l'aspirazione.

Built-in hoods are ever green products which cannot be missed in the collection of each producer of cooker hoods. They are always very popular and have the clear advantage to take little space as mounted inside the upper cabinet of the cooking area where they completely disappear.

Adding screens that can be opened when necessary or disappear when not used, help to have a better captation of the fumes and just a touch is needed to move the door/screen and start or end the aspiration of the hood.

# Parete Wall

Le Cappe a parete sono la perfetta soluzione di design quando la cucina offre poco spazio a disposizione. Si tratta di apparecchi di aspirazione classica formati da un piano orizzontale o inclinato, posto al di sopra del piano cottura in grado di captare facilmente i fumi e di convogliarli all'interno di una parte estetica in cui viene nascosta la ventola e la tubazione.

In questo modo la cappa diventa un elemento caratterizzante della cucina, protagonista assoluto come elemento di design per focalizzare l'attenzione nell'area di cottura.

Wall hoods are the design perfect solution when the kitchen is offering less space. They are classic appliances made by an horizontal or inclined part placed on top of the cooking hob, which can capture in an easy way the fumes then conveyed inside a design-part where the motor and tubes to take the air out are hidden.

Like this the hood is becoming a feature /element of the kitchen, main design protagonist to catch the attention in the cooking area.

# Motori remoti Remote blowers

Utilizzando i Motori remoti, che possono essere posizionati lontani dalla zona cottura, è possibile ridurre la rumorosità percepita, mantenendo sempre altissime performance nell'aspirazione. Esistono varie soluzioni: motori installabili all'esterno, a parete o tetto, all'interno dell'abitazione o addirittura da nascondere nello zoccolo del mobile da cucina.

By using the Remote blowers, which can be placed away from the cooking area, it is possible to reduce the noise heard, keeping at the same time high performances in aspiration. There are different solutions: external motors to be installed outside the house on the wall or on roof, inside the house or also in the plinth of the kitchen cabinet.

# Accessori Accessories

Utilizzando i Motori remoti, che possono essere posizionati lontani dalla zona cottura, è possibile ridurre la rumorosità percepita, mantenendo sempre altissime performance nell'aspirazione. Esistono varie soluzioni: motori installabili all'esterno, a parete o tetto, all'interno dell'abitazione o addirittura da nascondere nello zoccolo del mobile da cucina.

By using the Remote blowers, which can be placed away from the cooking area, it is possible to reduce the noise heard, keeping at the same time high performances in aspiration. There are different solutions: external motors to be installed outside the house on the wall or on roof, inside the house or also in the plinth of the kitchen cabinet.

## Radiocomando Remote control

**R01319006**  
Radiocomando Remote control

Con il suo design, sottile e leggero, consente di attivare a distanza tutte le funzioni della cappa. E' fornito di serie su alcuni modelli e su altri può essere acquistato separatamente.

With its design, thin and light, it allows to activate all the functions at distance. On some models it is delivered with the hoods, on other models it can be purchased separately.

**AK2534602**  
Porta radiocomando Remote holder

In acciaio verniciato nero, semplice da installare a parete e pratico per riporre il proprio telecomando in modo ordinato e senza rischio di perderlo. E' fornito su richiesta.

It is in painted black steel, easy to be installed to the wall and very useful to hold the remote in an orderly manner avoiding the risk to loose it. It is available on request.

# Kit filtrante a soffitto Ceiling filtering kit

# Kit filtrante da zoccolo Plinth filtering kit

# Filtri carbone Charcoal filters

L'uso dei filtri carbone riduce l'aspirazione dal 15 al 35%.  
The use of carbon filters reduces suction by 15 to 35%.

**55062097D**

**Coppia filtro rigenerabile rettangolare**

Pair rectangular regenerable filter

**55046315**

**Filtro carbone materassino**

Mat charcoal filter

I filtri possono essere lavati e rigenerati ogni 3-4 mesi (o più frequentemente se la cappa è sottoposta a un uso intensivo), fino a un massimo di 8 cicli di rigenerazione (in caso d'uso particolarmente intensivo si raccomanda di non superare i 5 cicli).  
Lavare in lavastoviglie a una temperatura MAX di 70° o lavare a mano in acqua calda senza usare spugne abrasive (non usare detersivi!).  
Asciugare in forno a una temperatura MAX di 70° per 2 ore.

The anti-odour filter can be washed and regenerated every 3-4 months (or more frequently if the hood is subject to intensive use), up to a Max. of 8 regeneration cycles (in case of particularly intensive use it is recommended that you do not exceed 5 cycles).

Wash in the dishwasher at a MAX temperature of 70° or hand wash in hot water without using abrasive sponges (do not use detergents!).

Dry in the oven at a MAX temperature of 70° for 2 hours.

**Filtro carbone materassino**  
Mat charcoal filter

Filtro rigenerabile in schiuma poliuretanic, ricoperta da carboni attivi granulari inserita in calza nera di poliammide (Nylon). Raggiunge una riduzione degli odori del 60%. E' possibile rigenerare il filtro ogni 2-3 mesi lavandolo in lavastoviglie o a mano e prima di riutilizzarlo asciugarlo in forno a 60°C per 60 minuti. Sostituirlo ogni 2-3 anni.

Regenerable charcoal filter composed of polyurethane foam covered with granular active carbon inserted into a polyamide sock (Nylon). It reaches an odour reduction of 60%. It is possible to regenerate the filter each 2-3 months washing it in the dishwasher or by hand. Before re-using it, dry it in the oven at 60°C for 60 minutes. Replace it with a new one each 2-3 years.

**55046266**  
Filtro carbone rettangolare  
Rectangular charcoal filter

**55046266D**  
Coppia Pair

Filtro a schiuma reticolata ad alta efficienza che raggiunge una riduzione degli odori del 90%. Sostituirlo ogni 4-6 mesi.

Filter reticulated foam with a high efficiency, granting an odour reduction of 90%. Replace it each 4-6 months.

**55046221**  
Coppia filtro rigenerabile rotondo  
Pair round regenerable filter

Filtri rigenerabili prodotti da estrusione di origine minerale, che può essere lavato e rigenerato ogni 3-4 mesi fino a un massimo di 8 cicli di rigenerazione.

Regenerable filters produced by extrusion of mineral origin, which can be washed and regenerated every 3-4 months up to a maximum of 8 regeneration cycles.

**55046244 / 55046211**  
Filtro carbone cilindrico  
Cylindrical charcoal filter

Filtro con carbone granulare di elevata qualità ed alta efficienza che raggiunge una riduzione degli odori del 90%. Sostituirlo ogni 12-18 mesi.

Filter with a high quality and efficiency granular charcoal, granting an odour reduction of 90%. Replace it each 12-18 months.

**55046232**  
**Filtro carbone da piano**  
 Base charcoal filter

Filtro con carbone granulare di elevata qualità ed alta efficienza che raggiunge una riduzione degli odori del 90%. Sostituirlo ogni 12-18 mesi.

Filter with a high quality and efficiency granular charcoal, granting an odour reduction of 90%. Replace it each 12-18 months.

**55046223 / 55046242 / 55046243**  
**Filtro carbone piatto**

**Flat charcoal filter**

Filtro con carbone attivo prodotto da estrusione di origine minerale. Sostituirlo ogni 4-5 mesi. Filter with active charcoal produced by extrusion of mineral origin. Replace it each 4-5 months.

**55046242**  
 Raggiunge una riduzione degli odori del 60%. Granting an odour reduction of 60%.

**55046243**  
 Raggiunge una riduzione degli odori del 75%. Granting an odour reduction of 75%.

**K06314KIT / AK2535498**  
**Filtro ceramico**  
 Ceramic filter

Innovativo filtro carbone modulare che raggiunge una riduzione degli odori dell'80%. E' possibile rigenerare il filtro ogni 2-3 mesi fino a che risulta integro, collocandolo nel forno alla temperatura di 150-180°C per 1-2 ore facendo attenzione a non coprire le 2 superfici di passaggio dell'aria.

Innovative modular charcoal filter with odor reduction of 80%. It is possible to regenerate the filter each 2-3 months until it stays intact. You have to place it in the oven at a temperature of 150-180°C for 1-2 hours, paying attention not to cover the surfaces where the air is going through.

# Installazione Installation

## Versione

La maggior parte dei modelli sono utilizzabili nelle due versioni: aspirante o filtrante. La cappa aspirante ha il compito di prelevare l'aria contenente grassi, fumi ed odori scaricandola verso l'esterno dell'abitazione. La cappa filtrante depura l'aria contenente grassi, fumi ed odori attraverso filtri a carboni attivi e la reimmette nell'ambiente. Nel caso in cui non sia possibile utilizzare la cappa nella modalità aspirante è possibile renderla filtrante mediante l'utilizzo del kit filtrante contenente deflettore e filtro carbone. Si raccomanda di osservare sempre le normative nazionali vigenti.

## Version

Most of the models can be used in the 2 versions: suction use and filtering use. The suction hood use must extract air with grease, fumes and vapours from the inside environment and then must expel them outside. A filtering hood purifies the air with grease, fumes and vapours by means of carbon filters and then emits the purified air into the same environment. When it is not possible to use the hood in the suction use, then it is possible to make the hood filtering with a filtering kit composed of deflector and carbon filter. We recommend to always take care of the national valid norms.

## Scegliere la cappa

Nello scegliere una cappa aspirante per la propria cucina, al di là dell'aspetto estetico, l'elemento determinante è rappresentato dalla portata d'aria, cioè dalla quantità d'aria aspirata dall'elettrodomestico in un'ora (m³/h). Il sistema di calcolo più corretto viene di seguito riportato: superficie della cucina per l'altezza dal pavimento al soffitto per 10, dove il 10 è un coefficiente che rappresenta il numero dei ricambi d'aria che in un'ora la cappa deve effettuare per assicurare una corretta aerazione.

Esempio:

A) 4,3 m x (B) 3,8 m x (H) 2,7 m x 10 = 441 m³/h

Quindi per assicurare un buon ricambio d'aria la cappa dovrà aspirare 441 m³/h.

## Choose your cooker Hood

When you have to choose a cooker hood for your kitchen, apart from the way it looks, the air delivery is the most important component for your choice. The air delivery is the quantity of air that your appliance is taking each hour (m³/h). The best way to calculate this is given as follows: surface of the kitchen x height from the floor to the ceiling x 10, where 10 is a coefficient representing the number of air-exchanges that the cooker hood must do each hour to assure a correct ventilation.

Example:

(A) 4,3 m x (B) 3,8 m x (H) 2,7 m x 10 = 441 m³/h

So your hood, in order to assure a good air exchange, must have a suction capacity of 441 m³/h.

## Distanze

Le cappe d'arredo vanno installate ad una distanza minima di 550 500 mm dai piani cottura elettrici e di 650 mm da quelli a gas. Sono progettate per essere collegate ad una tubazione avente diametro 150 mm, tuttavia per particolari esigenze, viene fornito un riduttore di diametro che consente anche di utilizzare condutture di diametro 120 mm. In linea di principio bisogna tenere conto che la portata della cappa diminuisce all'aumentare della lunghezza della conduttura, all'aumentare del numero delle curve utilizzate ed al diminuire della sezione del tubo. Si consiglia pertanto di minimizzare la lunghezza della conduttura di evacuazione, di evitare installazioni con molte curve e di utilizzare tubi di diametro 150 mm.

## Distances

The design cooker hoods must be installed at a minimum distance of 550 500 mm from the electric hobs and 650 mm from the gas hobs. They are conceived to be connected to a pipe with a diameter of 150 mm, anyway in front of possible special needs we supply them with a reducer that allows also to use connection to pipe with diameter of 120 mm. As a principle you can consider that the air delivery of the hood decreases with the length of the pipe, or with the number of the curves, or with the reduction of the pipe section. We strongly advice to keep the length of the pipe as short as possible, to avoid installation with many curves and to use pipes with 150 mm diameter.

## Filtri antigrasso

I filtri sono costituiti da un telaio metallico contenente tipicamente 10 reti in alluminio che consentono una ottima raccolta dei grassi presenti nei vapori di cottura. I filtri antigrasso vanno mantenuti puliti lavandoli periodicamente a mano o in lavastoviglie.

## Grease filters

The grease filters are made by a metallic frame having as average 10 layers of alu-nets which are allowing to capture in a very good way the grease from the cooking vapours. The grease filters must be kept clean with periodical washing operations both handmade or in the dishwasher.
